Release Report: CEREZA_V1.4.2

Release Date: 2025-12-23 11:19:05+00:00

Total Issues: 2

Release Description

Changes ## Fix latest issues: - #205 - #203 ___ ## Summary of changes * `HTTPHandler` additional that sends logs to local server to aggregate logfiles * `Timeout` handling correctly before each I/O on RS bus to prevent scheduler crash * Experiment run for 19 days without crash ## Metrics [![pipeline status](https://gitlab.com/cherrydev/cubix/badges/main/pipeline.svg?ref=a887dc3ee0b885efd34117d135440a756ee3b30a)](https://gitlab.com/cherrydev/cubix/-/commits/main?ref=a887dc3ee0b885efd34117d135440a756ee3b30a) [![code coverage](https://gitlab.com/cherrydev/cubix/badges/main/coverage.svg?ref=a887dc3ee0b885efd34117d135440a756ee3b30a)](https://gitlab.com/cherrydev/cubix/-/commits/main?ref=a887dc3ee0b885efd34117d135440a756ee3b30a) [![linting](https://gitlab.com/cherrydev/cubix/-/jobs/artifacts/a887dc3ee0b885efd34117d135440a756ee3b30a/raw/public/badges/pylint.svg?job=pylint)](https://gitlab.com/cherrydev/cubix/-/commits/main?ref=a887dc3ee0b885efd34117d135440a756ee3b30a) [![Documentation](https://img.shields.io/badge/docs-Passing-green.svg)](https://cherrydev.gitlab.io/cubix/) ## Changes since last update: [Changes since v1.4](https://gitlab.com/cherrydev/cubix/-/compare/CEREZA_V1.4...CEREZA_V1.4.1?from_project_id=42324438)

Tasks

#177646230: Can we post the log on a port through a socket ? (closed) - Assignee: Unassigned

Description:

Hook up the logfile to textstream and socket at the same time ?

Related Merge Requests:

!442359471: Resolve "Can we post the log on a port through a socket ?" (merged) - Merged: 2025-12-22 15:22:14.898000+00:00
Closes #205 Tested and validated, does not affect process, just another handler for the logger :rocket:

#177196053: Problem after 24H (closed) - Assignee: jean-robin peiteado

Logic would advise to increase the timeout and add a strict check before each measure_flow/set_flow/get_temp in order to ensure going to the correct handling without triggering the timeout ### Evaluation of maximum time per operation O.15 s before, between and after the single read, performed a maximum of 15 times. ### Non interruptible IOs When the IOs are impossible to

interrupt without damage, we need to check for changes in the security flag before and in-between those operations, as following: ```diff index 3351c0b0..1773c172 100644 --- a/mfc/axetris_aux.py +++ b/mfc/axetris_aux.py @@ -28,7 +28,7 @@ from files.main import CONFIG # Main parameters to change: -IDLE_TIMEOUT = 5.0 +IDLE_TIMEOUT = 10.0 TIMEOUT = 1.5 MFC_TYPE = "CBX001" # line to change: Configuration changes here and file.main.config.json ``` ```diff index f8efe774..349de0da 100644 --- a/mfc/main.py +++ b/mfc/main.py @@ -533,8 +533,14 @@ class Axetris: self.initialize_event.clear() try: # only handles timeoutError and RecoveryError self.parent.logger.log(2,f"Regular readings {self.port}") + if self.security_closed or self.shutdown_event.is_set(): + continue flows = self.measure_flows() + if self.security_closed or self.shutdown_event.is_set(): + continue temperatures = self.measure_temperatures() + if self.security_closed or self.shutdown_event.is_set(): + continue self.mfc_device.update_data({"flow": flows}) self.mfc_device.update_data({"temperature_mfc": temperatures}) except Exception as re_: @@ -554,6 +560,8 @@ class Axetris: f"mfc.main.Axetris.simplified_loop_{self.port}() Temperature values received: {temperatures}",) try: + if self.security_closed or self.shutdown_event.is_set(): + continue tmp_ = (copy(self.x) if not self.paused ``` Replicate on Burkert ```diff --git a/burkert/main.py b/burkert/main.py index b5d3c960..16e03d65 100644 --- a/burkert/main.py +++ b/burkert/main.py @@ -643,7 +643,11 @@ class Burkert: self.initialize_event.clear() try: # only handles timeoutError and RecoveryError self.parent.logger.log(2,f"Regular readings {self.port}") + if self.security_closed or self.shutdown_event.is_set(): + continue flows = self.measure_flows() + if self.security_closed or self.shutdown_event.is_set(): + continue temperatures = self.measure_temperatures() self.mfc_device.update_data({"flow": flows}) self.mfc_device.update_data({"temperature_mfc": temperatures}) @@ -664,6 +668,8 @@ class Burkert: f"burkert.main.Burkert.simplified_loop_{self.port}() Temperature values received: {temperatures}",) try: + if self.security_closed or self.shutdown_event.is_set(): + continue tmp_ = (copy(self.x) if not self.paused ``` ___ # Fixed for the moment After 5 days, no more issues with fix Remove extensive logging and cleanup before merging on main
